

# Preservation Action Plan: Textual/Word Processing Records National Archives and Records Administration (NARA)

DRAFT 20190801  
Template: 201907

## Electronic Record or Digital Surrogate Types and Associated Formats

Records created through the use of a word processing or text processing tool. Examples include but are not limited to: Minutes of meetings, organizational charts, diaries, calendars, correspondence, reports, briefing books, legal opinions, and directives.

## Essential Characteristics of this Record Type

The rapid evolution of textual data types, and the variety of agency usage, limits defining characteristics only in the manner in which NARA can currently accept the transfer of textual files: essential characteristics are currently dependent on the export format. While embedded or hyperlinked content may be found across record types, we may not know much about its structure, data type, or record type. We cannot capture every possible structural nuance of the records.

Some appearance characteristics are discussed in the Structure Characteristics section, since the appearance of a textual record can be partially based on technical structure that allows the record to be manipulated and displayed in a different manner. If the appearance is fixed, as for official publication, then the dimensions must be maintained. If the appearance is determined by user preference or is otherwise mutable, then the dimensions are probably not as important.

Questions which must be considered:

- Would a change in the record's appearance alter its meaning?
- Does changing the record's appearance diminish its value? For example, if the records have been appraised as permanent for their informational value, and not evidential, then appearance characteristics may not need to be preserved.
- Would a change in the record's technical structure alter its appearance?
- Would a change in the record's technical structure affect its possible behaviors?

Built in tools such as macros with built in reports or external links are related to more record or data types which have their own essential characteristics.

## Appearance

Name	Definition	Function Description
Language	A language identifier specifying the natural language(s) used in the document	
Fonts	<p>A list of fonts used in the document, and an indication of whether or not a font is embedded in a document.</p> <ul style="list-style-type: none"> <li>● Typeface (Arial, Times New Roman, etc.)</li> <li>● Size (10 pt, 18 pt, etc.)</li> <li>● Pitch</li> <li>● Spacing</li> <li>● Emphasis (bold, italic, strikethrough, underline, etc.)</li> </ul>	Stores the names of all fonts (embedded and non-embedded) used in a document to assist in rendering the content and identifying the documents with potential long-term preservation risks. There will always be a font in order to have text, however, there are other variables that determine whether a distinct font is a core characteristic. For example, where appearance is fixed, such as in a publication, then font is core.
Size	Document “page” size(s), e.g., Letter, Legal, A4	Physical or virtual dimensions. These characteristics are conditional. If the appearance is important, such as a publication, then this must be maintained. However, if only the content (“words absent their formatting”) of the document is important, such as meeting minutes, then these dimensional characteristics are not core.
Layout Orientation	Orientation of the “pages,” e.g., portrait versus landscape.	Needed for understanding content and context of record.
Text Orientation	Orientation of the text, e.g., horizontal, vertical, custom axes	Needed for understanding content and context of record.
Color	Identification of the use of color in text and layout elements, e.g. borders, boxes.	Color is essential if it bears meaning and/or value, or if the appearance is fixed.

	<ul style="list-style-type: none"> <li>• Hue: color family or name</li> <li>• Saturation: purity or sharpness</li> <li>• Brightness: shade or tint</li> <li>• Contrast: range of optical density or tone</li> </ul>	
Pagination	Pagination and content sequence in the document.	If present, then needed for contextual understanding of the record.
Forms	Form elements embedded in the document	
Annotations	Annotations included in the document.	
Tables	Includes content structured in a table feature, such as a dynamically generated table of contents.	
Graphics	Images embedded in the document, or graphics created using a word processing graphics feature.	
Outline	Includes content in an outline structure.	
Transparency	The use of transparency features for graphics or text in the document.	
Layers	The presence of layered graphic elements in the document.	

## Structure

Name	Definition	Function Description
Schema	<ul style="list-style-type: none"> <li>• Lists</li> <li>• Arrays</li> <li>• Models</li> <li>• Trees</li> <li>• Tables</li> <li>• Linkage: connection between or within records. If connections exist, then they are core</li> <li>• Template. Although there is a generally agreed upon composition that exists for written textual records (business and government standards) such as with a letter, the placement of addresses, date, salutation, signature, content, enclosure, carbon copies, if there is the existence of a template needed to generate a textual record, then the template is core.</li> </ul>	
Character Encoding	Encoding schema, e.g., US-ASCII, EBCDIC, UTF-8.	Required for the proper parsing and rendering of the record content.
Word Count	Total number of words in the document	Valuable for evaluating the completeness of the content after transformations, but can be highly variable between tools.
Character Count	Total number of characters in the document	Valuable for evaluating the completeness of the content after transformations, but can be highly variable between tools.

Line Count	Total number of lines in the document	Valuable for evaluating the completeness of the content after transformations, but can be highly variable between tools.
Paragraph Count	Total number of paragraphs in the document	Valuable for evaluating the completeness of the content after transformations, but can be highly variable between tools.
Table Count	Total number of tables in the document	Valuable for evaluating the completeness of the content after transformations, but can be highly variable between tools.
Graphics Count	Total number of graphics in the document	Valuable for evaluating the completeness of the content after transformations, but can be highly variable between tools.

**Behavior**

Name	Definition	Function Description
Macros and Linkages	User-created automated functions; User-defined linkages within and between documents/files.	Essential characteristics are currently dependent on the export format.

**Context**

Name	Definition	Function Description
Series	Identification of the document's inclusion in a series, and enumeration if present.	

Descriptive Metadata	Descriptive metadata embedded in the record file header.	Information contained within the record (intrinsic) that refers to the intellectual content of material and aids discovery of such materials, for example, Caption/Subject/Date/Event/Transaction can all add value to the record.
----------------------	--	--

**Current NARA Transfer Guidance for this Record Type**

Preferred: OpenDocument Text Format (ODF) 1.0, PDF/A-1, PDF/A-2

Acceptable: PDF 1.0-1.7, Microsoft Word Office Open XML (DOCX), Microsoft Word 97 Binary Document Format (DOC)

**Current NARA Public Access/Reference Format(s) for this Record Type**

*This Plan references existing public access file formats for electronic records at NARA, determined with a survey of the available public access formats in the National Archives Catalog. These references do not represent recommended public access formats under NARA policies. They are intended for informational purposes only.*

Reference Format: PDF

Public Access Format: PDF

### Risk and Prioritization Analysis

- Low Risk
- Moderate Risk
- High Risk
- 3 Numeric Risk Rating
- 5 Numeric Prioritization Rating

### Proposed Preservation Plan

- Retain file format in its existing format.
- Transform file to a new format.  
Transform into PDF
- Procure/develop tools to preserve, manage and provide access to records of this type in their existing form.
- Procure/develop tools to transform the format to the preferred normalized form.
- Provide Additional Information so that the record type remains understandable/usable over time.
- Explore Additional Options

**Justification:** This iteration of MS Word is not longer supported. Increasingly, migration to modern iterations of MS Word is difficult and damages the integrity of the original document.

### Preferred Processing and Transformation Tool(s)

- Universal Office Converter - Command line library that converts between any document format supported by LibreOffice/OpenOffice (<https://github.com/dagwieers/unoconv>)

## **Preferred Viewer/Access Software**

- Adobe Acrobat for PDF

# Microsoft Word Backup File, versions 97 onwards

NARA Format ID: NF00304

## Extension(s):

- wbk

## Documentation:

- <https://fileinfo.com/extension/wbk>
- [http://fileformats.archiveteam.org/wiki/Microsoft\\_Word](http://fileformats.archiveteam.org/wiki/Microsoft_Word)

## Risk and Prioritization Analysis

- Low Risk
  - Moderate Risk
  - High Risk
- 9 Numeric Risk Rating  
7 Numeric Prioritization Rating

## Proposed Preservation Plan

- Retain file format in its existing format.
- Transform file to a new format.
  - Restore to Word files as appropriate
- Procure/develop tools** to preserve, manage and provide access to records of this type in their existing form.
- Procure/develop tools** to transform the format to the preferred normalized form.
- Provide Additional Information** so that the record type remains understandable/usable over time.
- Explore Additional Options

**Justification:** Supported by current Microsoft Word versions. Determine whether the Word Backup files are associated with Word files and if the files should be considered record or non-record before taking any potential preservation actions, including restoring as Word .docx files.

## Preferred Processing and Transformation Tool(s)

- Universal Office Converter - Command line library that converts between any document format supported by LibreOffice/OpenOffice (<https://github.com/dagwieers/unoconv>)

## **Preferred Viewer/Access Software**

- Adobe Acrobat for PDF

## EndNote Import File

NARA Format ID: NF00172

### Extension(s):

- enw

### Documentation:

- <https://en.wikipedia.org/wiki/EndNote>

## Risk and Prioritization Analysis

- Low Risk
  - Moderate Risk
  - High Risk
- 14 Numeric Risk Rating  
14 Numeric Prioritization Rating

## Proposed Preservation Plan

- Retain file format in its existing format.
- Transform file to a new format.  
TBD, preferably ASCII delimited text
- Procure/develop tools to preserve, manage and provide access to records of this type in their existing form.
- Procure/develop tools to transform the format to the preferred normalized form.
- Provide Additional Information so that the record type remains understandable/usable over time.
- Explore Additional Options

**Justification:** Import files are already structured plain text that follow the EndNote schema with a proprietary extension, so conversion will not alter the content.

## Preferred Processing and Transformation Tool(s)

- TBD

## Preferred Viewer/Access Software

- Any Text Editor or Word Processing program.

# OmniPage Pro OCR

NARA Format ID: NF00344

## Extension(s):

- opd

## Documentation:

- <https://en.wikipedia.org/wiki/OmniPage>
- <http://fileformats.archiveteam.org/wiki/Ext:met>

## Risk and Prioritization Analysis

- Low Risk
  - Moderate Risk
  - High Risk
- 17 Numeric Risk Rating  
14 Numeric Prioritization Rating

## Proposed Preservation Plan

Recommended actions (more than one can be selected):

- Retain file format in its existing format.
- Transform file to a new format.
  - Transform into ASCII text
- Procure/develop tools to preserve, manage and provide access to records of this type in their existing form.
- Procure/develop tools to transform the format to the preferred normalized form.
- Provide Additional Information so that the record type remains understandable/usable over time.
- Explore Additional Options

**Justification:** OCR files are already structured plain text that follow the OmniPage structure with a proprietary extension, so conversion will not alter the content.

## Preferred Processing and Transformation Tool(s)

- TBD

## Preferred Viewer/Access Software

- Any Text Editor or Word Processing program.

## **eXtensible Markup Language (xml), Document Type Definition (DTD), eXtensible Markup Language Schema (xsd), and eXtensible Style Language (xsl, xslt)**

Marked-up plain text Unicode files which can be used to represent, parse, format, and display structured text.

**SEE: Web Content Record Format Preservation Action Plan**
